Database Security - Data Protection and ... - Oracle

Because this data protection mode prioritizes data protection over primary database availability, Oracle recommends that

a minimum of two standby databases be used to protect a primary database that runs in maximum protection mode to prevent a single standby database failure from causing the primary database to shut down.

Oracle Data Guard Protection Modes

Complete data protection for Oracle in hybrid and cloud environments. Read solution brief. As organizations consider moving Oracle to the

cloud, they must either 'lift and shift' their data protection strategy or pivot to a new architecture. Druva cloud backup integrated with Oracle RMAN offers more efficient protection and

recovery, on-demand scale and a lower TCO.

Move Oracle database protection to the cloud | Druva

Oracle Data Guard can be used with traditional backup,

restoration, and cluster techniques to provide a high level of data protection and data availability. Oracle Data Guard transport services are also used by other Oracle features such as

Oracle Streams and Oracle GoldenGate for efficient and reliable transmission of redo from a source database to one or more remote destinations.

Introduction to Oracle Data

The DBMS_TSDP_MA
NAGE.ADD_SENSITI

procedure
individually
identifies
sensitive
columns. An
Oracle
Enterprise
Manager Cloud
Control
Application Data

Model enables you to identify a group of sensitive columns. It then prepares this list of sensitive columns in XML format, which you then import into your database.

Transparent Sensitive Data Protection - Oracle

Data Guard
provides the
management,
monitoring, and
automation
software to
create and
maintain one or
more

synchronized copies of a production database to protect Oracle data from failures, disasters, human error, and data corruptions while providing high availability for mission critical

applications.

Database In
Data Guard -
Oracle
Maximum
Protection. This
protectionmode
ensures that
zero data loss
occurs if a
primary database
fails. To
provide this
level of

protection, the redo data needed to recover a transaction must be written to both the online redo log and to at least one synchronized standby database before the transaction commits.

In this fourth part of this series we will be looking at security and more specially data privacy/protection. When planning to move your oracle

databases (or any other app) to the aws cloud you will be thinking about how to enforce security and AWS offer many services to help us achieve that. Such services are : Subnets/VPC/Security groups/aws

config/aws cloud trail/aws IAM/AWS Secrets Manager/AWS KMS/EBS encryption/AWS GuardDuty/ etc.
