Fao Drip

Drip irrigation is most suitable for row crops (vegetables, soft fruit), tree and vine crops where one or more emitters can be provided for each plant.

Generally only high value crops are considered because of the high capital costs of installing a drip system.

Fao Drip

Irrigation Scheduling

Inline drip irrigation is ideal for all types of retaining walls, including walls with planted pockets, or just planted areas at the top or base of the wall. Its compact form allows irrigation even in the tightest of plant pockets. Inline drip prevents overspray and limits runoff, preventing

Online Library

Fao Drip

damage to walls and
limiting liability.
