High-powered microwaves (HPM) include two primary technologies. 1 The first is the electromagnetic pulse bomb (e-bomb). The next is the microwave amplification by stimulated emission of radiation (maser) which uses millimeter wave technology. Both weapons produce power in the megawatt range.

New World War: High-Powered Microwaves

Following in the footsteps of its popular predecessors, High Power Microwaves, Third Edition continues to provide a wide-angle, integrated view of the field of high power microwaves (HPMs). This third edition includes significant updates in every chapter as well as a new chapter on beamless systems that covers nonlinear transmission lines.

The first edition of High Power Microwaves was considered to be the defining book for this field. Not merely updated but completely revised and rewritten, the second edition continues this tradition. Written from a systems perspective, the book provides a unified, coherent presentation of the fundamentals in this rapidly changing field. The p

Defending at the speed of light. The Phaser™ high-power microwave system uses directed energy to down drones—single ones or swarms—at the speed of light. Operators focus a wide, arcing energy beam on drones that sends out a short, high power burst of electromagnetic energy, destroying their electronics and dropping them simultaneously from the sky. Using directed-energy systems to down drones - YouTube.

The high-power microwave (HPM) has important applications in many fields, such as heating and current drive of plasmas in tokamaks, radio-frequency acceleration in high-energy linear colliders, and radar and communication systems as well as directed energy weapons . If the amplitude of the HPM is higher than the air breakdown threshold, then the HPM radiation and propagation are strongly affected due to the space-time-dependent plasma generated in the air breakdown.

High-Power Microwave Energy as Weapon | SpringerLink

Zhang explained he will explore the generation and amplification of high-power microwaves (HPM) using electron beams generated by ultrafast lasers. “ Ultrafast lasers provide unprecedented capabilities to control electron beam dynamics, which is critical for HPM excitation, ” he continued.
