Understanding basic immunology

Basic Immunology. The immune system, defined in the simplest terms, is the system in our bodies that defends us against infectious disease. However, our immune systems are far more complex. Not only does it defend us against pathogens, it is also responsible for protecting us against cancer, initiating allergy symptoms, and determining the state of our general health.

Biology for Kids: Immune System

The immune system is a network of cells, tissues*, and organs that work together to defend the body against attacks by “foreign” invaders. These are primarily microbes (germs)—tiny, infection-causing organisms such as bacteria, viruses, parasites, and fungi. Because the human body provides an ideal environment for many microbes, they try to break in.
