The formula for the area
of a circle is an example
of a polynomial function.

The general form for
such functions is $P(x) =$
 $a_0 + a_1x + a_2x^2 + \dots +$
 a_nx^n , where the
coefficients (a_0, a_1, a_2
 $, \dots, a_n$) are given, x can
be any real number, and
all the powers of x are

Mathematics Form and
Function (eBook, 1986)
[WorldCat.org]

Almost every text I've
seen begins with
declaring that we should
multiply by a test
function and then
integrate it as if it's an
axiom. The author states
that the motivation
behind the weak form is
the realization two
vectors are equal if their

Where To Download

inner products with some
arbitrary test function is
the same. Then the
author continues on.
