Polymer solutions undergo a liquid – liquid phase separation where the polymer-rich phase is referred to as the coacervate phase. Dispersion of formed colloids is unstable and there is a tendency for coalescence (merging of colloids).

Polymer Solution - an overview | ScienceDirect Topics

Polymer solutions are solutions containing dissolved polymers. These may be liquid solutions, or solid solutions. The introduction into the polymer of small amounts of a solvent reduces the temperature of glass transition, the yield temperature, and the viscosity of a melt. Polymer solution - Wikipedia
Polymer solutions are used in producing fibers, films, glues, lacquers, paints, and other items made of polymer materials. The introduction into the polymer of small amounts of a solvent (plasticizer) reduces the temperature of glass transition, the yield temperature, and the viscosity of the melt.

If a non-solvent is added to this solution, the attractive forces between polymer segments will become higher than the polymer-solvent interactions. At some point, before precipitation, an equilibrium will be reached, in which $G = 0$, and therefore $H = T S$, where S reaches its minimum value.

Polymer definition and meaning | Collins English Dictionary

A polymer (/ ˈpɒlɪmər /; Greek poly-, "many" + -mer, "part") is a substance or material consisting of very large molecules, or macromolecules, composed of many repeating subunits. Due to their broad spectrum of properties, both synthetic and natural polymers play essential and ubiquitous roles in everyday life.

Poly(N-isopropylacrylamide) is a temperature-responsive polymer with a low critical solution temperature (LCST). It swells and become hydrophilic below LCST and shrinks and become hydrophobic above LCST. These responsive behaviors of poly(N-isopropylacrylamide) when formulated in hydrogel show gel formulation, above LCST.
