For users familiar with the linux operation system you may proceed to edit the system manually. For users not familiar with linux and ASL, at the Linux CLI (command line interface)

Type `sudo asl-menu` as the example below shows.

```
repeater@repeater:~$ sudo asl-menu. This will load the AllStarLink configuration
```

# Download File PDF Your First Allstar Repeater

menu.

Allstar Node Setup and  
Configuration Guide

# Download File PDF Your First Allstar Repeater

The node number stanza is the first stanza in rpt.conf. [1999] ; Replace with your assigned node number The node number stanza contains the following key/value pairs. alhangtime= This controls the length of the repeater hang time when the alternate hang timer is selected with a control operator function. It is specified in milliseconds. Sample:

Repeaters

AllStarLink's primary use is as a dedicated computer node wired to your repeater or radio. Connections from Echolink, other VoIP clients and telephone calls are supported. We also have a Java Applet which can be used on older computers to access AllStarLink nodes. AllStarLink has 20,793 users and 17,531 nodes.
